Summary

Frontend-focused Computer Science student building production-grade React applications, including NeuralHealer — an AI-powered mental health platform — Frontend & Mobile (graduation project) — and a real-time seizure detection dashboard. Proficient in React, JavaScript, Tailwind CSS, and modern UI development practices.

Projects

NeuralHealer — Graduation Project | React 19, React Native, Tailwind CSS, Zustand, React Query, i18next

- Built the web (React 19 + Vite) and mobile (React Native) frontends for an AI-powered mental health support platform, implementing a real-time therapeutic chat UI with WebSocket/STOMP streaming responses.
- Achieved cross-platform feature parity between web and mobile clients, managing global state with Zustand, server state with React Query, and multilingual support (Arabic + English) via i18next.
- Designed accessible, empathy-focused UI components compliant with WCAG standards, collaborating with backend and AI teams to integrate crisis detection alerts and emotion-aware conversation flows.

NeuroPulse | React, Tailwind CSS

- Built the frontend for a real-time seizure detection dashboard, developing React data visualizations and interactive charts that consume backend ML model outputs for EEG anomaly detection.
- Built interactive anomaly detection charts with user-configurable thresholds to support healthcare monitoring workflows.
- Ensured accessibility compliance with WCAG standards using semantic HTML and accessible Tailwind component design.

Mini Games — Tic-Tac-Toe | React, Tailwind CSS

- Built single-player and multiplayer game modes across 3 distinct categories with modular React component architecture.
- Implemented win/loss tracking, restart functionality, and customizable themes using React state management for a replayable experience.

ToDo App | React, Tailwind CSS

- Developed a responsive single-page task management app with create, edit, delete, drag-and-drop prioritization, and local storage persistence via custom React hooks.
- Optimized re-render performance using React.memo and useCallback; designed mobile-first with Tailwind CSS utility classes.

Education

Bachelor of Computer Science | Modern Academy | Cairo, EG

Expected 2026

Technical Skills

Languages: JavaScript, HTML, CSS, Java, Python, C/C++

Frameworks & Libraries: React, Tailwind CSS, REST APIs

Tools: Git, GitHub, Docker, VS Code, Visual Studio

Work Experience

Customer Service Agent — Technical Support | Sutherland Global Services | 5th Settlement, EG
May 2025 – Dec 2025

- Provided technical support for Xfinity internet and TV products, resolving complex customer queries under pressure.

Chat Support Agent | Raya CX | 6th of October, EG

Jun 2024 – Nov 2024

- Supported users of the Shahid entertainment platform, resolving complaints and improving customer retention.

Telesales Agent | Sierratek | Maadi, EG May 2024 – Jun 2024

- Optimized call scripts with persuasive language techniques for DME account outreach.
